Abstract of the Disclosure

A browser testing system and method thereof are provided. The browser testing system includes a device with a browser connectable to the Internet installed thereon; and a browser test server that is connected to the device through a wire/wireless communication network. The browser test server registers test cases for use in testing the browser, creates a session from predetermined test cases selected by a tester that gains access to the browser test server through the communication network, provides the tester with the created session, and stores result values obtained from a browser test using the provided session.
